

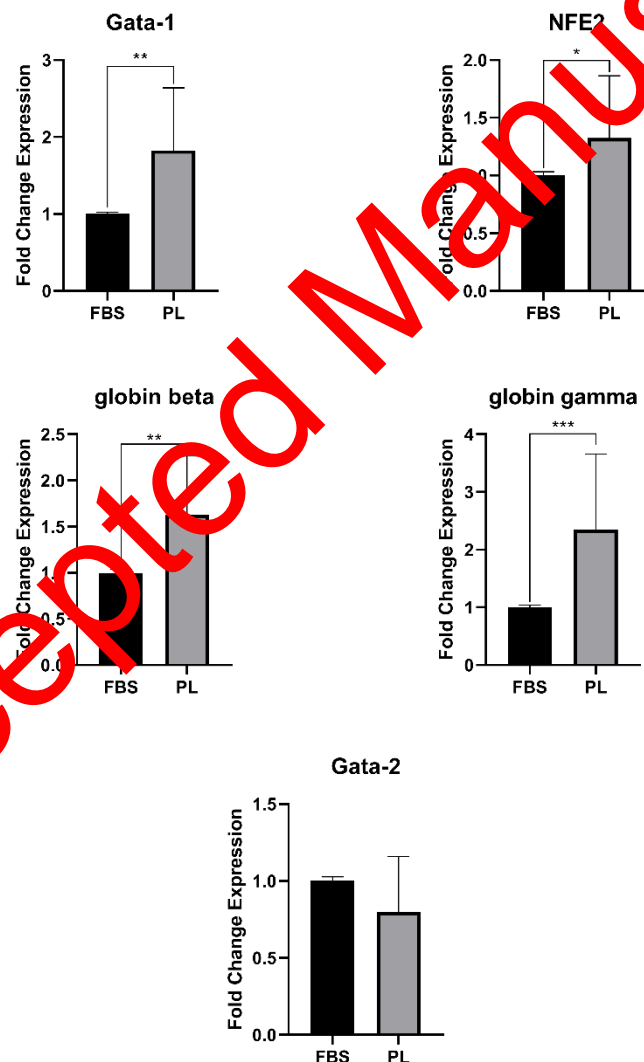

**Figure 5. Flow cytometry analysis of erythroid cells surface markers cultivated in PL or FBS-containing media. A.** Percentage of erythroid surface markers at day 7. **B.** Percentage of erythroid surface markers at day 15.

**Figure 6. Gene expression analysis.** The erythroid cells were harvested after 8 days from FBS-containing (black bars) or PL-containing (gray bars) media. Data are presented as mean  $\pm$  standard deviation from six independent experiments (\* $p < 0.05$ , \*\* $P < 0.01$ , \*\*\* $P < 0.001$ ).
