

Supplementary Figure 1. Comparison of the scattered plot chart data of flow cytometry analysis in blank, control (only Lipofectamine 2000), and transfected (Lipofectamine 0.75 + Scrambled) T47D and MCF-10A cells. Percentages present the transfection efficiencies. There is no significant difference between blank and control samples.

T47D

Supplementary Figure 2. Effect of Lipofectamine 2000 and PAMAM G5 on cell viability in T47D cells.
